

Energy efficiency services for buildings that heat with electricity

In partnership with the City of Chicago, Elevate Energy is offering free energy saving services to multifamily buildings that use electricity for heat.

At no cost to you or your tenants, Elevate Energy will provide a top-of-the-line power strip and programmable thermostat to every unit in your building — a value of \$100 per unit. We will also update older lighting in common areas for free.

Elevate also provides a free on-site consultation to determine if your building(s) would benefit from other improvements, such as lighting or insulation. We provide substantial discounts on these upgrades. The consultation is free whether or not you move forward with the recommendations.

Elevate has served numerous other electric-heat buildings throughout the city. The program year is coming to a close, and we want to help as many owners and tenants to save energy as possible. Schedule your on-site visit today.

Delivering results

Building owners have great things to say about Elevate Energy's full-service energy efficiency program.

"The assistance we received through the entire process was fantastic. I think this program is especially valuable to families like mine who are trying to create a safe and affordable home."

Liz Vogel
2-flat owner, \$500-\$700 projected annual savings

"Going through the program made owning this building viable. If you are a building owner making a large investment in your property, you have to incorporate energy efficiency. This must be done first to stabilize the property."

Ljubomir Sopic
Owner of three multifamily buildings, \$68,967 actual annual savings

"Implementing energy efficiency upgrades across Little City's campus has the potential to save us tens of thousands of dollars each year – dollars we can use to provide programing and supportive services to our clients and their families."

Shawn Jeffers
Executive Director of the Little City Foundation, \$36,000 projected annual savings

Save up to 25% on your electricity bill with a programmable thermostat

Properly using a programmable thermostat is one of the easiest ways you can save energy and money in your home. Programmable thermostats enable you to conveniently set automatic temperatures throughout the day, making it extremely easy to manage your electric-heat usage. You can create a set point temperature for comfort and another to maintain an energy-saving temperature.

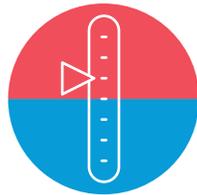

Benefits:

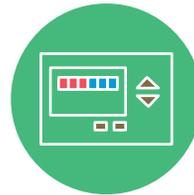

Regulate the temperature of your home in all seasons.

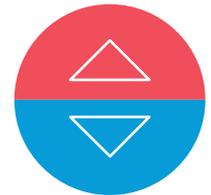

Maintain an indoor temperature range to match your comfort needs without wasting energy, all day long.

Make the comfort and savings automatic with thermostat controls.

Change settings as often or infrequently as necessary.

Smart power strips make it easy to prevent your electronics from wasting energy

Many consumer electronics continue to draw power even when there are switched off. This is known as vampire load. Advanced Power Strips (APS) are designed to reduce the amount of energy used by consumer electronics. By replacing your standard power strip with an energy saving power strip, you can significantly cut the amount of electricity used by your devices and save on your electric bill.

Model features

1. Wide space outlet
2. "Always on" outlets (3)
3. Phone/fax/modem
4. Energy Saving controlled outlets
5. Energy Saving master outlet
6. On / off switch
