

ENERGY IMPACT ILLINOIS

We make it simple to lower your bills and improve the comfort and value of your home

Call us to get started

Our energy advisors will explain the process and connect you with a trusted contractor who will provide a comprehensive energy assessment for just \$99. The assessment identifies how your home uses and wastes energy and pinpoints the most cost-effective improvements to make.

We will be your advocates

We have advisors working in your community who will act as your advocates. We oversee our contractors to make sure the work gets done right at a reasonable price, and we help you learn about rebates and loans that can reduce the cost of energy efficiency improvements. The typical improvements, such as air sealing and insulation, are very affordable and pay for themselves quickly.

Improve the comfort and value of your home

Most people don't realize there are many benefits to a more energy efficient home. Homes that complete the EI2 program are warmer in the winter and cooler in the summer, making your family more comfortable. And homes that become 15 percent more efficient qualify for the Illinois Home Performance with ENERGY STAR™ certificate, which proves to prospective home buyers that your home is energy efficient. Research suggests that homes with these certificates sell faster and at higher prices.

\$400 average annual savings

More than **4,000** participating homes

Host a house party!

Free energy assessments are available to homeowners who host five or more neighbors for the event.

“I had a great experience. I told all my neighbors, ‘Invest a little in your home. It will be more comfortable and you’ll save money.’”

— Burnetta from Bronzeville, Chicago

“The quality of life change is significant. You come into your house and it’s always comfortable. That’s really hard to achieve, so it’s having a big impact on our family.”

— Steve from River Forest
